EDUCATION

De La Salle University, Dasmariñas

Aug 2021 — Aug 2026

BS - Computer Engineering

Lyceum of the Philippines, Cavite

Jun 2018 — Jun 2020

TVL - Information and Communications Technology

PROJECTS

Line Following Robot | PIC 16, Stepper Motors

Oct 2025 — Dec 2025

- Developed PIC16 firmware via register manipulation for real-time sensor processing and autonomous navigation.
- Implemented NEMA 17 motion control using micro-stepping to maximize torque and trajectory accuracy.

Conveyor Belt System | Arduino

May 2025 — Jul 2025

- Designed DC motor control circuits, optimizing torque and speed for reliable material handling.
- Developed automated sorting logic for a conveyor system, achieving 99% classification accuracy by optimizing response triggers for specific material conditions.

Vision Guard: Live Person Detection & Counting System | Python, YOLO, OpenCV

Feb 2025 — Mar 2025

- Built real-time computer vision system for security and occupancy monitoring applications, capable of detecting and counting multiple individuals simultaneously from live video streams.
- Implemented YOLOv8 object detection with optimized preprocessing pipeline, achieving under 200ms end-to-end latency and 98% detection accuracy in diverse lighting conditions.

Web Application Thesis Registration System | PHP, MySQL, JavaScript

Nov 2024 — Dec 2024

- Developed full-stack academic management platform serving 200+ students and faculty, streamlining thesis registration, approval workflows, and document tracking.
- Implemented secure authentication system with role-based access control for students, advisors, and administrators.

CERTIFICATIONS

Deep Learning 101: Understanding Neural Networks

2025-03

Microsoft Azure Seminar: Cloud-Based Database Solutions

2025-03

PLC Programming & Logic Design

2025-03

Open Standard SIP Based Telephone System

2025-03

EXPERIENCE

Student Intern

Feb 2019 — Apr 2019

New Era Signs & Graphics

Dasmariñas Cavite

- Managed and scheduled print production and logistics for client deliverables, ensuring on-time delivery for over 50 projects.
- Optimized vector rendering, reducing material waste by 15% during precision cutting.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++, Java, C, SQL, PHP

Frameworks & Libraries: React, Flutter, Node.js, OpenCV, YOLOv8, TensorFlow, Arduino, MPLAB Harmony

Developer Tools: VS Code, Git, Figma, Android Studio, EagleCAD, MPLAB X IDE

Cloud & DevOps: Microsoft Azure

Specialized Technical Skills: Deep Learning, Computer Vision, PCB Design & Fabrication, Embedded Architecture
